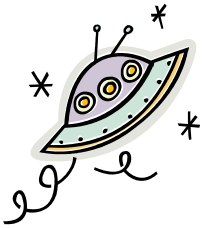
Science Fiction



Science fiction is a genre of fiction in which the stories often tell about science and technology of the future. It is important to note that science fiction has a relationship with the principles of science—these stories involve partially true-partially fictitious laws or theories of science. It should not be completely unbelievable, because it then ventures into the genre fantasy.

The plot creates situations different from those of both the present day and the known past. Science fiction texts also include a human element, explaining what effect new discoveries, happenings and scientific developments will have on us in the future. Science fiction texts are often set in the future, in space, on a different world, or in a different universe or dimension.

1. What would you do if you woke up and found yourself in a strange new world? What things would you need to survive?

2. What do you imagine the future to be like? Describe the year 2115, what will the world be like? How will people live? What new inventions will we have?
